

## Z- axis Calibration

**Z-axis calibration is essential for every 3D printer. Run this test to make sure that the building plate is leveled to the LCD screen. This is to ensure that models and prints will adhere to the building plate.**

### SONIC XL 4K/ SHUFFLE XL/ TRANSFORM

**Step 1:** Remove the Resin Vat

Make sure to remove any objects present on the machine's platform.

**Step 2:** Prepare a piece of A4 paper and lay it flat on the LCD. This piece of paper will be used for leveling the building plate.

**Step 3:** Use a wrench to loosen all 4 screws present on the sides of the building plate. After loosening it, make sure to double-check to see if the plate is loose and movable.

**Step 4:** Click on the Z CALIB button on your printer's touch panel to begin the process. Wait for 1-2 minutes as the building platform extends to touch the A4 paper laying flat on the LCD.

**Step 5:** Once the plate has touched down, press down tightly on the sides of the building plate and adjust it to make sure it is lying tight against the sheet of paper.

**Step 6:** Tighten all 4 screws on the sides of the building plate, with the other hand still pressing the building plate down.

**Step 7:** Click DONE on the touch screen and wait for the building plate to retract.

**Step 8:** Once the plate has retracted, remove the A4 paper, and you're ready to begin your 3D printing journey!
